

## 04 | Visual Studio Tour | Code Demo

Dr Stuart Thomason

### Using Visual Studio

- We will use Visual Studio 2019 with the C++ toolchain
  - Create a C++ template with correct settings for assembly code
  - Compile and debug in a visual editor
- Make sure you understand how our Visual Studio installation works in the lab
  - Use it during lab sessions and get used to it
  - Understand where it stores its files (and your code)
  - Coursework must compile and run on a machine in the labs
- We cannot offer technical support with Visual Studio on your own device
  - You can try to install it, but you are on your own
  - Note that the Mac version of Visual Studio will not compile Intel x86 assembly code

There are no more slides for this lecture

Attend the lecture to see a live demo of Visual Studio  
(lecture recording will be available afterwards)
